LEVEL II

SSI SPECIALTY CLASS

The sport diving industry has come to accept NITROX as the **safe gas** for the recreational SCUBA diver.

NITROX IS READILY AVAILABLE AT DIVE STORES AND RESORTS THROUGHOUT THE WORLD!

Just like any new technology there have been misunderstandings about NITROX gas and how it will be used and misused by sport divers.

LEARN NEW TERMINOLOGY

NITROX for normal sport diver depths is definitely a safer gas to use, with more oxygen and less nitrogen you will be able to stay down longer, and get back into the water quicker between dives as well as do more dives per day. Think how much more fun you will have taking pictures and exploring the underwater world!

LEARN ABOUT NEW EQUIPMENT!

During this class you will find out how simple it is to incorporate new ideas and technology with your existing diving system.

This class is designed to enhance dive planning skills that you already have and incorporate NITROX into them. The class is taught in one session where you will learn dive planning, Enriched Air Cylinder filling protocols and practice gas analysis procedures.

Your class has an optional two open water dives that can be completed on any of our trips

with a NITROX instructor. These two dives are required for you to use this class as a SPECIALTY class towards Advanced Open Water certification. We supply two NITROX tanks and gas with this class.

**NITROX
COMPATIBLE
REGULATOR**
**SCUBAPRO
MK17 S555**

*Sounds too good to be true?
Sign up now for the NITROX specialty class and learn about the gas that will make your diving safer.*
